

Cuthbert offers turnkey chassis, container, and genset tracking for ocean carriers and terminal operators. Our systems automate seaport and container yard operations, including appointments for truck visits, verification of mission, security control and traffic queue control. We offer tight integration with existing systems, replacing key entry. We have extensive experience with video-based OCR, voice synthesis and traffic information radio, RFID, laneside driver communication pedestals, and weigh-in-motion scales.

Cuthbert brings to the table deep knowledge of the business processes of its clients business partners: truckers, brokers, forwarders, and shippers. The result is solutions that deliver value to both parties to a trucking transaction, not simply offloading work from part to another in the supply chain.
